#### Technology Neutrality in Internet, Telecoms and Data Protection Regulation 1

This article examines the meaning of "technology neutrality" for Internet, telecom and data protection regulation. Performance standards are a form of technologically neutral regulation because they give companies flexibility to adopt the technology of their choice to achieve the outcome defined by the standard. Technology neutrality also refers to regulatory principles that apply to a broad range of activity and do not depend on technological "silos". Finally, technology neutrality means that regulators should not try to shape the market by imposing technological choices.

#### Right Click. Delete ... Evidence Tampering? 5

The advent of social media has significantly changed the way in which people interact; we now chat, flirt and apply for jobs from behind the keyboards of our mobile devices. This is no surprise considering how many Facebook and Twitter users there are alone. In South Africa, there are currently 9.4 million active Facebook users (that is the same as the number of cars on South African roads), 5.5 million active Twitter users and 2.7 million active LinkedIn users. In fact, many of you reading this will be connected to at least one of these social networks. However, are you aware of the possible consequences of your conduct?

#### Site Blocking and the Future of Online Brand Protection: *Cartier v BSKyB* 7

This article considers the High Court ruling in *Cartier International AG v British Sky Broadcasting Ltd* that trade mark owners can secure court orders requiring ISPs to block websites that infringe trade mark rights by selling counterfeit goods online.

#### Software Piracy: Courts are Coming Down Hard on Software Infringers in India—"Entire Premises Sealed" 10

The Indian judiciary, especially the Delhi High Court, has often granted a range of remedies along with damages, ex parte ad interim injunctions, etc. in respect of proceedings concerning software piracy infringement. Most of the remedies are equitable in nature, as the courts mostly exercise their discretion while granting these reliefs. In a typical software piracy matter, an end-user is found to be using software programs of the software publishers without any licence or with insubstantial licences as compared with the deployment or usage of such software products. The courts have also been upfront in providing reliefs that are based upon a sound perception of the facts and issues in question.

#### Virtual Identities and the GOV.UK Verify Hub 12

Government services are increasingly being provided digitally to improve their efficiency and convenience. Identity verification is an important element and the Government has established a new verification service provided by private service companies. Processing of personal information by business and Government raises legitimate issues of privacy and data security. How does the new service address these issues?

MICHAEL WIGLEY

#### Case Study: Limiting ICT B2B Liabilities under New NZ Law 14

A claim against a multinational ICT supplier by an English city council is a great example of how the new Fair Trading Act legislation could affect NZ ICT suppliers.

#### EU or US: Which Has More Actual Privacy? 16

This article challenges the conventional wisdom that actual privacy levels are higher in the EU than in the US. It contends that omnibus laws are not necessarily more effective than sectoral laws; that intelligence surveillance is more controlled by the US than by other governments; that criticism of Safe Harbor is misdirected; and that the most effective privacy practices have emanated from, and are still more prevalent in, North America.
