Online Small Claims Courts: The Reform of the European Small Claims Procedure 111

This article evaluates the evolution of the European Small Claims Procedure and the motivations behind its recent amendments. It argues that this procedure would be more effective if it were complemented with ADR and ODR techniques.

The More Things Change the More They Stay the Same? An Analysis of the New Fair Dealing Provisions in UK Copyright Law 114

Fair dealing is an objective test related to the use of copyrighted material by a third party. While it has been part of UK copyright law since 1911, recent technological advances have forced change. This article examines the new fair dealing provisions in UK copyright law and the claims that the new provisions did not go far enough.

Broadcaster under the Spotlight: Hong Kong's First Competition Case since its New Competition Ordinance Came into Force, also Affecting the Telecommunications Industry 120

Hong Kong's Competition Ordinance came into full operation in December 2015, and is Hong Kong's first cross-sector legislation. The Ordinance prohibits conduct that prevents, restricts or distorts competition in Hong Kong. In this article, we look at a recent case involving Hong Kong's main television broadcaster. This case gives participants in both the telecommunications and broadcasting industry (as well as wider industry) a useful insight into how Hong Kong's new Competition Tribunal is likely to interpret future competition cases in Hong Kong. In particular, it gives useful guidance as to the standard of proof it will require.

Determining the Liabilities of Internet Service Providers in Cyber Defamation: A Comparative Study 123

The need to protect free speech as a right and the need to protect the reputations of others are two often conflicting legal positions which need to be balanced. The internet is a medium where free speech can be carried out and equally creates a space where reputations can be injured. Damage to reputation can lead to defamatory action being taken against the author, publisher or any other contributor to the publication of the defamatory statement. To facilitate communications on the internet the roles played by the internet service providers or intermediaries cannot be underestimated. And often times, the intermediaries are made the sole defendant or joined as a party to defamatory suits. The UK and the US are seen as laboratories for defamatory actions on the internet. Also, India and South Africa have responded through their laws to the problem of determining intermediary's liability in internet defamation. This research sets out to present a comparative study of the laws in the four nations in determining the liabilities of internet intermediaries, with the hope of discovering the strengths and weaknesses of the law and making suggestions as to the best approach to be adopted in shielding the intermediaries from liabilities and also protecting the reputations of others.
